

**PLACES** is the reference periodical for people attentive to innovation in the contract world. Designers talk personally about their concepts through a symbolic dialogue, creator of an innovative language that forms a varied panorama of proposals, a model of reference for designing places, object of the contract industry. So, a clearly stated target: architects, interior designers, contractors, who consider high quality in the hospitality industry to be a characterising element. Every issue of **PLACES** presents and analyses designs that point towards useful models and innovative directions for the sector. Bilingual text.

## CONTENTS

### Hospitality

Design, restoration, décor of hotels, restaurants, tourist resorts and communities, specific themes dedicated to technologies and services for the hospitality industry. Essential moment to get to know the latest trends, the most innovative ideas, future developments of the international hotel industry; window on the constantly evolving hospitality panorama.

### Entertainment

From bar to lounge bar, from café to art café, from the classic restaurant to the show food restaurant. Entertainment spaces that change, are transformed both in terms of aesthetics and commercial proposal, tend to turn into "retail entertainment" spaces. **PLACES** analyses the characteristics of this phenomenon, communicating with the new professionals specialising in the design of new spaces for entertainment with

new ways of interpreting and living the night, in new entertainment spots with aesthetically attractive and pleasing contexts.

### Wellness

The definition of Wellness immediately brings to mind fitness, but in fact it goes beyond this, extending the circle of interest to a concept that involves the person overall: wellness as lifestyle. So wellness becomes the centre of a new concept and **PLACES** responds to these new needs, giving readers a complete, authoritative instrument, exhaustively covering the panorama of wellness, presenting fitness areas created by design experts.

### Working

New directions turning the attention to "Workplaces". Spaces where important functions are performed and where an interesting phenomenon of upgrading is taking place.

"Workplaces", with new functions compared to the past, and often with avant-garde solutions as regards techniques and technologies used, paying special attention to energy savings and environmental aspects. More and more nowadays, work is not just a physical space, but also a mental and sensorial space, so work and emotion. "Work & Emotion": a complex theme that will lead us to collect the interpretations of some designers as testimony.
